

Display Cases Assembly Instructions

Please ensure that all film has been removed from both sides of the acrylic. This film may be white, blue or clear. Make sure everything is intact before you begin assembling.

Lay out all of the components flat, and slide in the 2 side pieces into the slots provided on the bottom piece, (the bottom piece is the piece with the 4 holes).

Next, place in the front and back pieces, these do not slide in like the side pieces. They are designed to sit into the 2 slots provided on the bottom piece.

Once you have the outside shell, place your box inside resting it on the bottom piece. Now bring all of the sides together so that they clip into each other.

Finally, slide in the top piece allowing the final slot to click into place. This will now securely hold together. If you encounter issues, please email us at info@gamingdisplays.co.uk.
