

## Tiered Stands Assembly Instructions

Tiered Stands consist of your chosen shelf colour, along with two sides, a rear support and brace pieces as shown. Make sure everything is intact before you begin assembling.

All parts will have protective film on both sides. The film may be blue, white or clear. Remove all of the film before continuing. Then, lay down one of the side pieces and place all of the brace pieces in to the slots. The number of these will depend on the number of tiers that your stand has.

Once all of the brace pieces are in the slots, place the other side piece over the brace pieces, carefully placing the brace pieces into the slots one at a time until all of the brace pieces are slotted in.

Carefully pick up the stand and slowly rotate it so that the back corner is angled upwards. Now you can place the rear support into the slots on the back of the stand.

Finally, carefully pick up the stand again and rotate it back around forward, slotting your coloured stands into the remaining slots. If you are having any issues or believe that you have been sent the wrong components do not hesitate to email us at [charlotte@ino-plaz.co.uk](mailto:charlotte@ino-plaz.co.uk).
